EDUCATION

University of Santo Tomas | Manila, Philippines — Expected Graduation: June 2027
Bachelor of Science in Information Systems
Honors: Dean's Lister

The University of Tokyo, Matsuo-Iwasawa Lab | Tokyo, Japan (Online) — 2026 - Present
AI and Data Science Program

Technical Skills: JavaScript | TypeScript | Python | Java | PHP | SQL | Bash | PowerShell | Luau | React | Next.js | Node.js | Express | FastAPI | PostgreSQL | MySQL | Supabase | Linux (Kali) | Windows | Git | Vercel | Postman
Security: Penetration Testing | Red Teaming | Web Vulnerability Assessment | Nmap | Burp Suite | ffuf | sqlmap | Hydra | Metasploit | Hashcat | Impacket | BloodHound

PROJECTS

Second Look: Scam and Phishing Detection App — October 2026
React Native, *Expo*, *Node.js*, *PostgreSQL (Supabase)*, *Render*, *GitHub Actions* | secondlook.tamara-dev.com
- Built a website and mobile app that checks texts, emails and links for scams in English and Filipino, explaining each red flag in plain language.
- Detected impersonation of 170+ banks, e-wallets and government services, with negation-aware rules that stopped real bank OTP alerts from being flagged.
- Secured the public API against SSRF, rate-limit bypass and SQL injection using parameterized queries, a least-privilege database role and row level security, backed by 26 automated tests and CI.

Debrief: Penetration Test Reporting Tool — October 2026
Python, *python-docx*, *ReportLab*, *YAML*, *GitHub Actions* | github.com/riri0821/debrief-pentest-report
- Built a command-line tool that turns finding notes into professional pentest reports as editable Word and PDF files.
- Generated the full report structure, from executive summary and scope to CVSS-scored findings, screenshot evidence and retest results, with input validation that blocks bad or unsafe data.
- Used it to assess Second Look, documenting a Medium-severity rate-limit bypass (CVSS 5.3) that I found, fixed and retested.

J1SPA Analytics
Next.js, *Supabase*, *PostgreSQL*, *FastAPI*, *Python*, *Recharts* | j1spa.tamara-dev.com
- Built an analytics and decision support web app that replaced manual sales and stock tracking for a scooter parts retailer.
- Implemented five-model demand forecasting and automatic low-stock, demand-spike and overstock alerts on a live owner dashboard.

WORK EXPERIENCE

Business Systems Developer and Operations Associate | Manila, Philippines — 2023 - 2026
- Built and maintained the business's analytics and sales tracking system on the PERN stack.
- Implemented role-based access control for staff accounts and login throttling with a cooldown after failed attempts to block brute-force attacks.
- Cleaned and migrated 11 years of historical Excel sales records into the new system using Python.
- Produced daily sales and operational reports for management, with zero data mishandling incidents.

Freelance Full-Stack Developer | Remote — 2023 - 2025
- Designed, built and deployed full-stack websites for clients with PostgreSQL, Express, React and Node.js.

Founder and Developer, Roblox Clothing Store | Online — 2020 - Present
- Founded a Roblox store, designed its clothing line and scripted Robux purchase prompts in Luau.
- Generated 300,000 Robux in sales; the store still earns today.

Sales Data Analyst | Manila, Philippines — 2020 - 2023
- Processed raw transaction logs into dynamic Excel reports that tracked sales performance and revenue trends for management decisions.

ADDITIONAL

Certifications: HTB Certified Penetration Testing Specialist (HTB CPTS), in progress | Red Teaming paths on TryHackMe and Hack The Box, in progress
Involvement: Member, Information Systems Society (AY 2024-2025)
Languages: English (fluent) | Filipino (native) | Japanese (JLPT N5 level, Unmei Nihongo Center)
